

Name: AMRITANSU SINGH AMRITANSU SINGH | Reg. No: RA2511003011028

Unit 2 : Session 2 : SLO 2 | Traversal and Searching in an Array

I. Pseudocode for Array Traversal

- Step 1: [INITIALIZATION] SET $I = 1$ (or 0 in C indexing)
- Step 2: Repeat Steps 3 to 4 while $I \leq N$
- Step 3: Apply Process to $A[I]$
- Step 4: SET $I = I + 1$
- [END OF LOOP]
- Step 5: EXIT

II. Fill in the Blanks

1. loop is a loop (typically for) accesses each element.
2. 0 traversal typically starts at index 0.
3. $n - 1$ is the last index of an n -element array.
4. bounds never let the index go out of bounds.
5. $n - 1$ reverse traversal starts from the last index, $n - 1$.
